## smart power 12V

### Description:

The smart power 12V is a battery-based DC power supply upgrade designed for Clearaudio's concept, concept active and Performance DC turntables. Like the smart power 24V, it provides clean power that is independent of the variability and inherent noise of the mains supply. With a minimal output impedance, it delivers a steady, stable voltage, allowing your concept or Performance DC turntable to maintain perfect speed stability. Again, like the 24V version, the smart power 12V can be set to switch automatically from battery play mode into recharging mode and will continue to enhance your turntable's performance and protect it from short circuits and power surges, even while charging.

When used with the concept active turntable, the smart power's (12V) benefits are multiplied, since both the turntable's motor and the on-board phono stage are fed with pure, clean DC power.

## Professional Power

### Description:

The Professional Power is a high quality transformer-based and stabilized power supply for either 12 Volt or 24 Volt DC.

It is designed to fill the gap between the standard power supply that comes with our turntables and our state-of-the-art, auto-charging smart power battery supply.

The Professional Power provides improved filtering over the standard power supply, which delivers a much cleaner power source. Cleaner power and increased 'headroom' for Clearaudio's turntables, thanks to a smoother motor performance and extended reserves. The resulting improvements in sound quality are significant.

The unit's construction features professional-grade electronic components and a resonance-optimized transformer to ensure that no mechanical interference will be transferred through the housing.

Available in silver and black aluminium.
