Every possible setting / alignment on a tonearm can here be set by micrometer or Microspindle with scale.

It is thus repeatable to at least 1/100 in mN/mm /gram for EVERY setting.

Thus allowing a fine-tuning of cartridge performance **never before available in this precision – and: repeatable when ever wanted!**

A true cost-no-object approach to maximize performance and adjustability of Phono tonearm to a degree and completeness never before available.

The **Titan GC** is designed to show what *is really possible* in tonearm design.

Titan GC
